

than the original Big Shooter bench. It also costs a bit more – \$480 versus \$425 for the standard unit. Carrying bags are available to protect the bench's finish as it bounces around in the bed of your truck.

The Big Shooter bench will see lots of use in the years ahead. It's one of the sturdiest, best-designed portable benches I've tried. This is one bench that will never be relegated to the discard pile.

UNIQUETEK MICROMETER POWDER BAR KIT FOR DILLON AUTO POWDER MEASURES

UniqueTek, Inc. recently introduced its Micrometer Powder Bar Kit, which upgrades existing Dillon powder bars to a micrometer powder bar. It's said to provide, "both true indexing capability and 1/1000-inch adjustment increments."

According to the company, the Micrometer Powder Bar Kit eliminates the need to guess how many turns of the adjustment screw will return you to a previous powder weight. It fits all powder bars for the Dillon Auto Powder Measure and Belted Magnum Powder Measure. The kit includes all-metal micrometer head, Loctite® and instructions. The powder bar is not included.

"The primary advantage of the Micrometer Powder Bar Kit is that it allows users to return to any powder charge weight previously recorded with an accuracy equivalent to 0.002 grains of Winchester 231 gunpowder," UniqueTek says. "One powder measure can be easily moved from one toolhead to the next, then instantly adjusted to dis-

pense the correct powder weight." This eliminates the need for an expensive powder measure in each caliber, producing significant savings in both time and cost.

"This product has been four years in the making, and I'm excited to finally bring it to market," says Lee Love, UniqueTek's product design

engineer. "There just isn't another micrometer adjuster for the Dillon Precision Auto Powder Measure available anywhere."
